Gas Safety and Control Technology for Power Generation and Commercial/Industrial Gas Fired Equipment

Karl Dungs, Inc.

Karl Dungs, Inc. is an ISO 9001 and PED 97/23 EC module D1 approved facility.

e-mail info@karldungsusa.com
Internet http://www.dungs.com/usa
Dungs has over 500 employees manufacturing DUNGS products in three factories. These products, which comply with high safety requirements, are used in gas fired systems throughout the world. DUNGS products are suitable for industrial combustion gases, non-corrosive gases and air. Free of non-ferrous metal versions are suitable for gases with max. 0.1 Vol.% \( \text{H}_2\text{S} \), dry (sewer or bio gases).

The DUNGS MBC... MultiBloc integrates filter, two safety shutoff valves and servo pressure regulator in one compact unit:

- Dirt trap and Microfilter
- Safety shutoff valves rated for 5 PSI
- Servo pressure regulator unit to ANSI Z21.18 / CSA 6.3
- Outlet pressure: 0 - 4 PSI
- Precision regulation of outlet pressure for optimal outlet pressure stability

- Flanged joints with pipe threads to ISO 7/1 or NPT
- Easy to install
- Light weight
- Available in 12 VDC, 24 VDC, 24 VAC and 120 VAC

The MultiBloc permits individual solutions with valve proving system and min./max. pressure switches. High flow rates with low pressure drops.

The MBC is intended for forced air burners and premix burners in conjunction with mechanical or electronic integrated gas-air regulation units. Suitable for natural, LP and butane gas.

Application

The MBC-...SE is a compact unit designed for...
The MBC-WND WhirlWind series multifunctional control valve integrates two safety shutoff valves, a zero governor and a swirl plate assembly, that premix gas and air when used with a pre-mix blower.

The two safety shutoff valves shut the gas flow when de-energized. The zero governor regulates the outlet pressure to 0" W.C. or slightly less than 0" W.C. signal. The swirl plate assembly utilizes turbine technology to achieve exceptionally low fire stability and gas and air mixing, which can result in high turndowns.

These controls include low fire zero point correction of gas/air ratio at zero governor and main flow adjustment, which reduces the high fire flow to desired capacity and allows a natural gas burner to be converted for LP gas by simply turning the adjustment; no replacement orifice required.

**Application**
For pre-mix burners and forced-draft burners. Suitable for natural gas, propane gas and air.
The Dual Modular Valve (DMV) combines two safety shutoff valves (which can be wired independently or in parallel) in one compact housing.

- Valve 1 (V1) of the DMV-D and DMV-DLE series is fast opening and fast closing.
- Valve 2 (V2) of the DMV-D is fast opening, while V2 of the DMV-DLE is slow-opening for smoother light-off.

- Max. flow adjustment on V2 provides variable main flow on both models.
- Valve 2 (V2) incorporates proof of closure (POC) on models designated /622.
- Valves 1 & 2 (V1 & V2) incorporate proof of closure on models /632.

### Application
This DMV is recommended for industrial and commercial heating applications that require two safety shutoff valves in series with or without proof of closure. The DMV is suitable for natural gas, propane, butane, air and other inert gases.

DMV Dual Modular Valves NEMA 4x
(Optional Proof of Closure)

The Dual Modular Valve (DMV) combines two safety shutoff valves (which can be wired independently or in parallel) in one compact housing.

- Valve 1 (V1) of the DMV-D and DMV-DLE series is fast opening and fast closing.
- Valve 2 (V2) of the DMV-D is fast opening, while V2 of the DMV-DLE is slow-opening for smoother light-off. Max. flow adjustment on V2 provides variable main flow on both models.
- Valve 2 (V2) incorporates proof of closure (POC) on models designated /624.
- Valves 1 & 2 (V1 & V2) incorporate proof of closure on models /634.

Application
This DMV is recommended for industrial and commercial heating applications that require two safety shutoff valves in series with or without proof of closure. The DMV is suitable for natural gas, propane, butane, air and other inert gases.

The Two-Stage Dual Modular Valve (DMV-ZR) combines two safety shutoff valves (which can be wired independently or in parallel) in one compact housing.

- Valve 2 incorporates two stages, which can be set at two different firing rates. Both firing rates are field adjustable and can modulate from high to low during burner operation.
- Valve 1 (V1) of the DMV-D and DMV-DLE series is fast opening and fast closing.
- Valve 2 (V2) of the DMV-D is fast opening, while V2 of the DMV-DLE is slow-opening for smoother light-off. Max. flow adjustment on V2 provides variable main flow on both models.
- Valve 1 (V1) incorporates proof of closure (POC) on models designated /612.

**Application**

This DMV-ZR is recommended for industrial and commercial heating applications, where two safety shutoff valves and modulating between two firing rates is required. The DMV-ZR Dual Modular Valve two stage is suitable for natural gas, propane, butane, air and inert gases.
The automatic shutoff valve SV is a single-stage safety shut-off valve for gas burners and gas burning appliances:
- SV series are fast opening and closing
- SV-DLE series are slow opening and fast closing.
- Models ending in /614 integrated proof of closure. Models ending in /604 are of the non-proof of closure type.
- All models pipe thread on inlet side and threaded flange on outlet side.
- An additional threaded flange on inlet side is optional.

**Application**
The SV is recommended for industrial and commercial heating applications that require a safety shutoff valve incorporating proof of closure. The SV is suitable for natural gas, propane, butane, air and inert gases.

The MVD/6 and the MVDLE/6 are electrically operated normally closed, automatic safety shutoff valves for gas burners and gas appliances.

- MVD/6 is fast opening and closing. MVDLE/6 is slow opening and fast closing.
- Optional field installable visual indicator (VI) or CPI 400 with indication lamps and SPDT interlock switch for valve position.

### Application

The MVD/6 and MVDLE/6 are recommended for industrial and commercial heating applications that require one safety shutoff valve or two safety shutoff valves in series. The MVD/6 and MVDLE/6 safety shutoff valves are suitable for natural gas, propane, butane, air and inert gases.

The valve proving systems - Model VPS 504 S06 available for the DMV/SV series modular automatic valves and model VDK 200A available for stand alone valves test and verify that two automatic shutoff valves in series are fully closed before either a system start-up and/or after system shutdown when wired and interlocked to a suitable flame safeguard control.

The valve proving system will halt the start-up sequence to a burner if it detects an open automatic shutoff valve, thus preventing ignition under potentially dangerous conditions.

**Application**
The valve proving systems are recommended for industrial and commercial heating applications. Some authorities having jurisdiction accept the VPS in lieu of “proof of closure” when integrated with the preignition system and/or in lieu of a vent valve when it checks the valves at start up and shut down. It can also be used as a valve seat tightness check when used within its capabilities. The VPS is suitable for natural gas, propane, air and inert gases. Not suitable for butane gas.

GAO / GMH / GML
Gas Pressure Switches

The GAO-, GMH-, and GML-A2... pressure switches are compact ventless pressure switches for direct mounting to DUNGS modular valve train components and the SV valve.
- GAO-, GMH- and GML-A4... pressure switches are compact pressure switches with 1/4" NPT threaded connections.
- A2 & A4 series pressure switches are suitable for making and/or breaking a circuit when the medium’s pressure changes relative to the set point. The set point can be set in the field by an adjustable dial with an integrated scale.
- GAO is an automatic reset pressure switch, while the GMH and GML are manual reset pressure switches.

**Application**
The DUNGS series of pressure switches are recommended for industrial and commercial heating applications with the DUNGS DMV dual modular valves or with 1/4" NPT connections. The GAO-, GMH-, and GML-A2 & A4... pressure switches are suitable for natural gas, propane, butane, air and other inert gases.

• AA-... Compact pressure switches for automatic burner controls.
• AA-A1...Pressure switches that are factory set with hose connections.
• AA-A2-4... Pressure switches that are field adjustable and feature hose connections.
• AA-A2-6... Pressure switches that are field adjustable with NPT threaded connections also include a test button in the lower plastic housing.
• AA-A4... Pressure switches that are field adjustable with NPT threaded connections in the lower aluminum housing.

Application
Differential pressure monitoring in combustion air proving, ventilation and air-conditioning systems. The AA-... can be used as a pressure, vacuum or differential pressure switch for air and non-aggressive gases. These switches are not suitable for natural gas, propane, butane and other combustible gases.

The FR... series pressure regulators, as spring-loaded pressure regulators with adjustable setpoint that feature an internal sensor for regulating output pressure.

- **FRI 7../6**: Modular design, directly mounts to DMV valves - Constant output pressure with integrated 50 micron filter.
- **FRS available as Line Pressure Regulator or as Gas Appliance Pressure Regulator.**

### Application
The FR... series gas pressure regulators are recommended for industrial and commercial heating applications and are suitable for natural gas, propane, butane, air and inert gases.

The DMA actuator drives from 0° to 90° via a 4 - 20 mA input signal and features integrated 4 - 20 mA output terminals. The DMA can move in any direction and stop anywhere over the entire 90° stroke. The DMA is available in three different set speeds: 6 s, 12 s, and 30 s. The DMA has one independent, field adjustable auxiliary SPDT switch and two field adjustable limit switches.

The DUNGS DMK butterfly control valve operates from 0° to 90° degrees in either direction. Inlet-side male thread and outlet-side female thread enable a space-saving assembly directly to most DUNGS valves.

**Application**
The DMA is used to automatically modulate the amount of gas supplied to the burner. The DMK are recommended for industrial and commercial heating applications for modulating gas or air supply to burners. The DMK control valves are suitable for natural gas, propane, butane, air and other inert gases.

The DMV is the main component of the DUNGS Modular Gas Safety System comprised of:

1. DMV combines two Automatic shut-off valves in one housing
2. GAO (or GMH & GML) Gas pressure switch
3. Flanges 1/2” to 2” NPT threaded
4. FRI Pressure regulator with built in 50 micron Filter
5. Visual indicator
6. Proof of closure switch or CPI 400 Closed position indicator switch
7. Pilot line connector
8. VPS 504 Valve proving system

The modular gas safety system reduces piping costs and space requirements.
DUNGS designs, builds and tests high quality fuel trains for just about any application. 50 years in the gas control industry allows DUNGS to be your design partner with experience in Europe, the Americas, Australia and Asia.

**DUNGS Fuel Trains**
- Comply with applicable US and Canadian Standards and European Directives
- Natural gas, propane, butane, air, manufactured gas and other inert gases.
- Prepiped valve trains for landfill gas, digester-gas or biogas also available.

Manually operated shutoff valves for Flammable Fluids and Gases
Fully ported manual shut-off ball valves with low turning torque. Valve seat and packing are made of Teflon; O-ring is made of Viton.

Gas Orifice & Venturi Metering Devices
Permit accurate setting of burner air & gas flow for optimum efficiency.

Electric Actuators
Designed to operate dampers, butterfly valves and similar devices. Torques from 16 in. lb. to 1300 in. lb.

Ignition Transformers
For reliable ignition of gas burners.
